DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-9, 11-61 are allowed.

The following is an examiner's statement of reasons for allowance:

Referring to claim 1, the Jin et al, (US Patent 6771122 B2) discloses the general concept of a microphone preamplifier, comprising a semiconductor substrate. However, the Jin et al reference taken alone or in combination with another reference does not disclose or fairly suggest the microphone preamplifier comprising a differential input stage with an inverting input terminal and a non-inverting input terminal and output stage with an output terminal; wherein a signal is to be applied to the non-inverting input terminal; and a feedback circuit comprising an active device which provides an ohmic impedance across a two-port circuit, having a low pass frequency transfer function that couples a part of the input signal from the output terminal back to the inverting input terminal; and a DC offset implemented in the feedback circuit to set the DC bias voltage at the output terminal as recited in claim 1.

Claims 3-9, 11-17, 22-26, 28-34, 50, 54 depend on claim 1.

Referring to claim 18, the Jin et al, (US Patent 6771122 B2) discloses a microphone preamplifier, comprising a semiconductor substrate, a differential input stage with a first signal input terminal and a second signal input terminal and output stage with an output terminal; wherein a signal is to be applied to the second signal input terminal and a feedback circuit comprising an active device which provides an

ohmic impedance across a two-port circuit, having a low pass frequency transfer function that couples a part of the input signal from the output terminal back to the first signal input terminal; and a DC offset implemented in the feedback circuit to set the DC bias voltage at the output terminal. The Jin et al reference taken alone or in combination with another reference does not disclose or fairly suggest selecting the preamplifier is configured to receive the microphone signal via an input bias element which has relatively high ohmic impedance when the microphone signal is relatively small in magnitude and relatively low ohmic impedance when the microphone signal is relatively high in magnitude as recited in claim 18.

Claims 19-21, 27, 35-49, 51-53 & 55-61 depend on claim 18.
